

Innovative Solutions For Continuous Machining

Jorgensen For Dealers and Resellers

*Adding value through chip
removal and coolant filtration*

Adding Value With Chip Conveyors and Filtration

A properly specified conveyor optimizes chip removal with fewer touches and little-to-no maintenance. Jorgensen filtration systems increase coolant and tool life for better part finishes and most importantly less downtime!

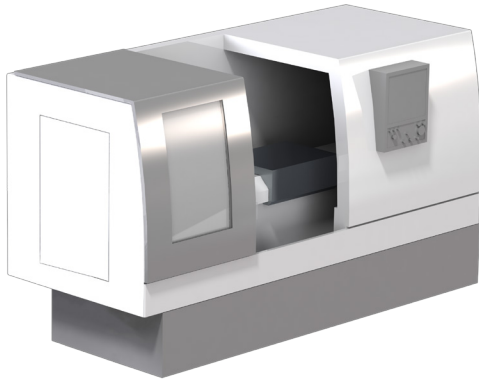

- 1. Personalized Solutions:** Jorgensen offers solutions tailored to your end users' specific requirements. Along with our library of pre-engineered models, our engineers create custom solutions for coolant management, filtration, chip processing, or conveyor automation.
- 2. Exceptional After-Sales Service and Maintenance:** Our service team and outside sales reps across the country provide timely and effective after-sales service, including maintenance, repairs, and spare parts availability.
- 3. Comprehensive Training and Support:** Jorgensen's product training and support equips your team with the knowledge and skills they need to succeed. From in-person training sessions to online resources, we're dedicated to empowering your team.

EcoFilter Conveyor

About Jorgensen Conveyor and Filtration Solutions

We offer a wide range of standard and customized systems for machines across North America and globally. All products are engineered to provide high quality, cost effective, application-based solutions for even the most demanding environments. Jorgensen sets the industry standard for quality, reliability, and value for all your conveyor and filtration needs.

Solutions For Most Machine Tool Brands

Through working directly with dozens of machine tool manufacturers, we have an extensive library of conveyor drawings available, saving time and engineering costs.

Conveyors, EcoFilters, and Filterveyors

Our conveyors include hinged steel belt, magnetic, drag flight, mag-drag, MunchMan, and more. Each conveyor is custom engineered to fit the available space and material handled.

Self-cleaning EcoFilters and Filterveyors allow for maintenance-free operation, extended coolant life, and less downtime. Our filtration conveyors streamline the metal chip and coolant filtration process, resulting in optimized productivity.

Ecofilters are a small-profile option that filter down to 80 microns within the body of a standard conveyor.

Single and dual stage Filterveyors effectively combine chip removal and drum filtration down to 50 microns nominal. These conveyors excel in applications handling high chip and coolant volumes.

Dual Stage Filterveyor

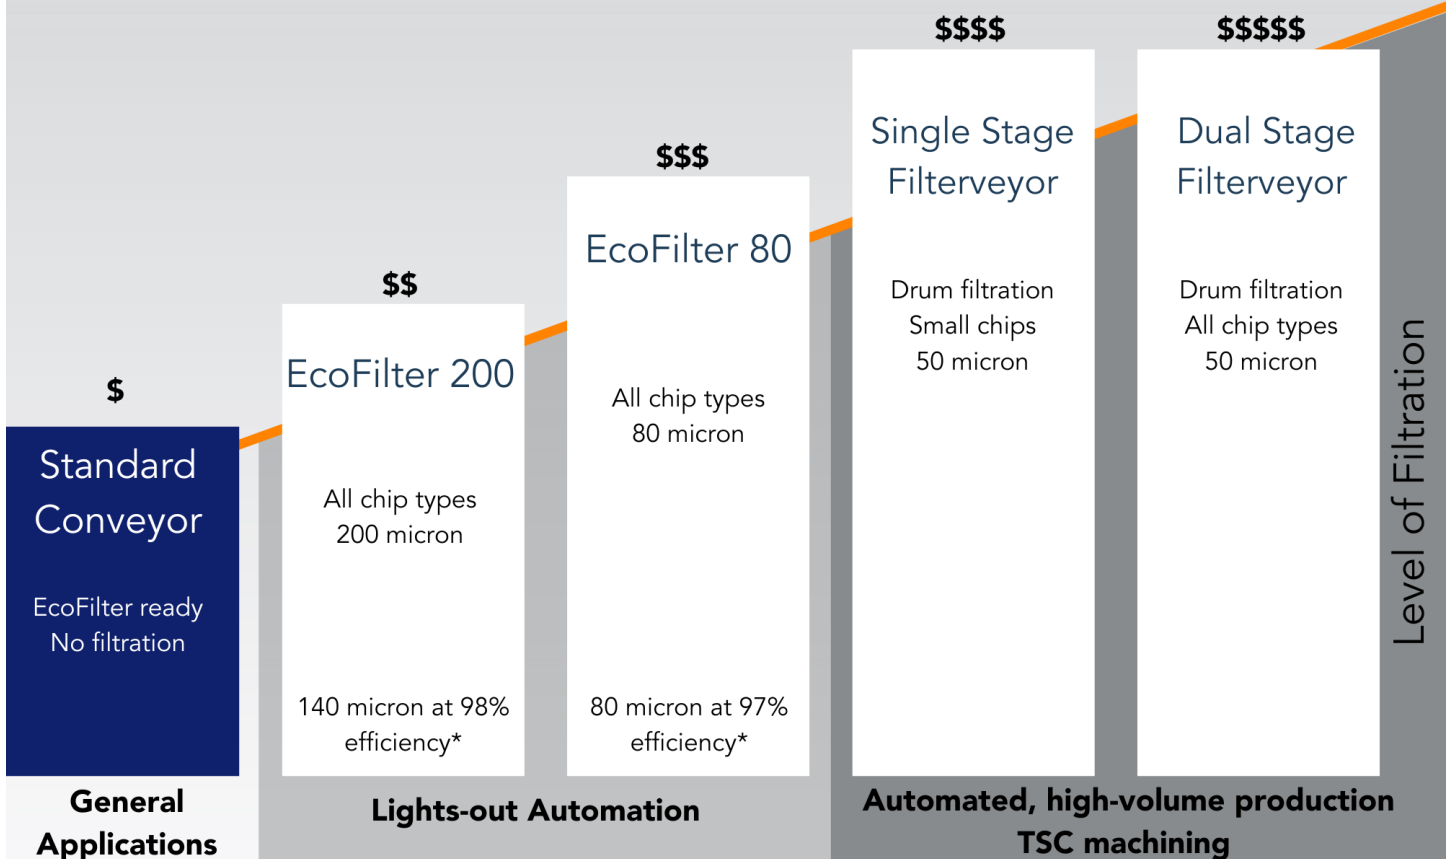

Choosing The Right Conveyor

Our conveyors are designed to reduce down-time and maintenance costs long-term. Filtration conveyors offer highly efficient coolant filtration within the conveyor footprint and no disposable media.

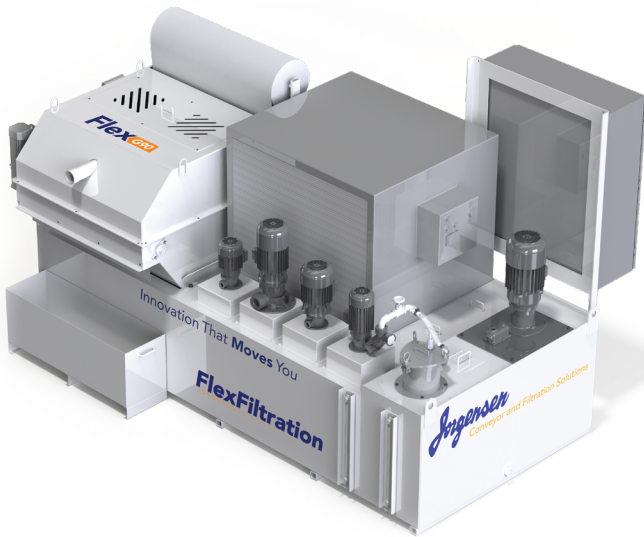

Experience cleaner coolant, optimal chip removal, longer tool life, and better part finishes.

FILTRATION CONVEYORS

*3rd party tested and verified

FlexFiltration

Our customizable solutions cater to a wide range of metalworking applications and coolant types. From standard filtration to specialized requirements, trust FlexFiltration to deliver tailored solutions that meet the users' unique needs.

Options include gravity media, bag filtration, cyclonic, and more!

Jorgensen for Dealers, Distributors, and Resellers

Our local reps have extensive experience with Jorgensen products and the machine tool industry. We offer a flexible pricing model with dealer discounts and quantity discounts.

Our training and support is dedicated to helping you help your customers. We offer a variety of training resources, and are happy to meet with your staff. With over 70 years of technical expertise, Jorgensen consultations analyze the entire machining system for optimal performance.
